ELITE CASH (ELC)

Efficient, Effective & Innovative Cash

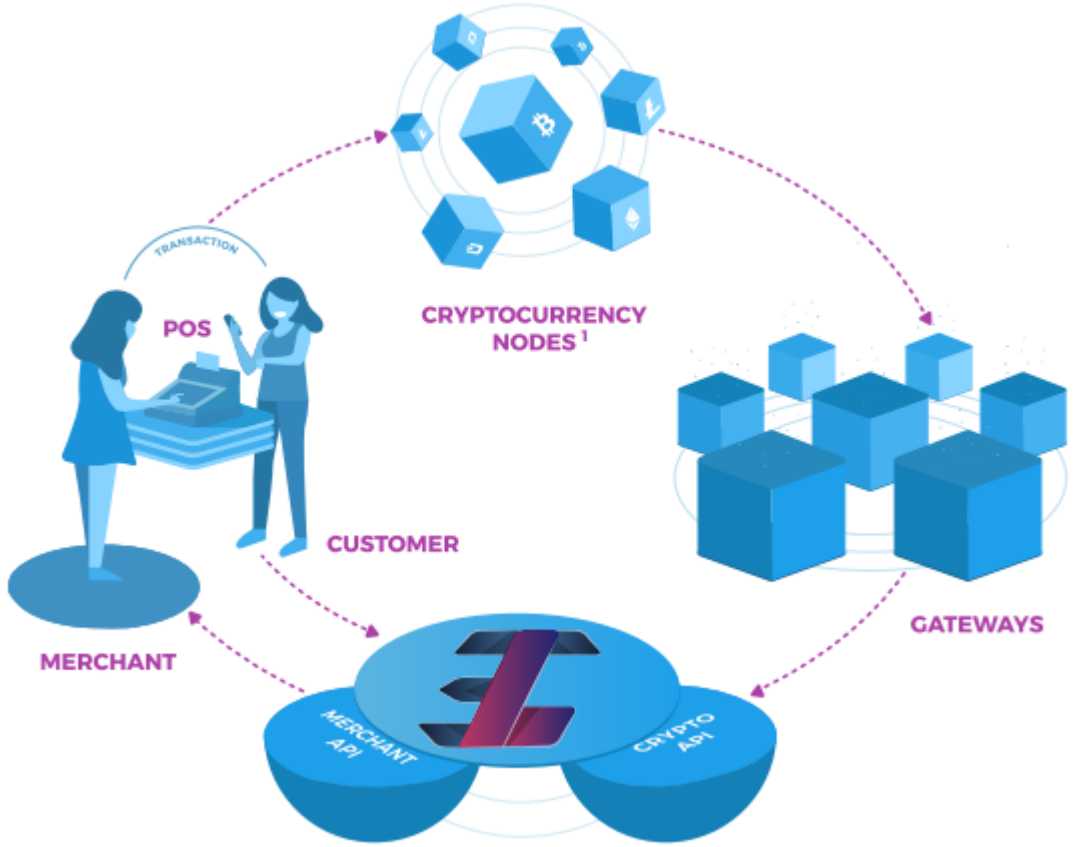
Introduction

What is Elite Cash (ELC)?

Elite Cash is a set of blockchain software solutions that enables local stores and online merchants to accept payments in cryptocurrencies.

How Elite Cash Works?

ELC bridges the EtherLite blockchain ecosystem with retail, hedging the risks, increasing speed, and enabling instant payments in multiple cryptocurrencies.



1 - NODE — a full copy of a blockchain of a particular cryptocurrency specified during invoice creation.

2 - CORE — the essence of our technology is based on the ETL smart contract that allows it to function and perform payment transactions.

Elite Cash Products

Multicurrency Wallet

Merchant App

Modules for
Point-of-Sale Systems

Web Control
Panel

E-commerce and
Shopping Cart Plugins

We introduce mQR (merchant QR), which is a single QR with embedded business ID, transaction ID, and amount.

The mQR code:

- can be installed at payment kiosks, POS (Point of Sale), and other payment systems
- is designed as a standard for cryptocurrency transactional usage
- minimizes the time required to complete the payment
- can be used to pay with either crypto or fiat
